EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mrs. Catherine M. Voisinnet on October 27, 2006.

The application has been amended as follows:

In claim 1. (Currently Amended) An image display system comprising at least one display device connected to a host device, wherein:

an image is displayed on the at least one display device in accordance with an image signal and a first signal which is output from the host device, said first signal being a synchronization signal; and

the at least one display device monitors a state of coupling with the host device based on ~~a second signal different from the first signal~~ one of a data enable signal and a data transfer clock signal, wherein the at least one display device manages power based on the state of coupling.

In claim 4. (Currently Amended) An image display system comprising at least one display device connected to a host device, wherein:

an image is displayed on the at least one display device in accordance with an image signal which is output from the host device; and

Art Unit: 2629

the at least one display device determines a state of coupling with the host device based on a data-enable signal which is output from the host device, wherein the at least one display device manages power based on the state of coupling.

In claim 5. (Currently Amended) An image display system comprising at least one display device connected to a host device, wherein:

an image is displayed on the at least one display device in accordance with an image signal which is output from the host device; and

the at least one display device determines a state of coupling with the host device based on a data transfer clock signal which is output from the host device, wherein the at least one display device manages power based on the state of coupling.

In claim 10. (Currently Amended) A display device connected to a host device, the display device displaying an image in accordance with an image signal and a first signal which is output from the host device, said first signal being a synchronization signal,

wherein the display device monitors a state of coupling with the host device based on one of a data enable signal and a data transfer clock signal, wherein the at least one display device manages power based on the state of coupling. ~~a second signal different from the first signal.~~

In claim 11. (Currently Amended) A display device for use in an image display system comprising at least one display device connected to a host device, wherein an image is

Art Unit: 2629

displayed on the display device in accordance with an image signal which is output from the host device,

wherein the display device determines a state of coupling with the host device based on a data-enable signal which is output from the host device, wherein the at least one display device manages power based on the state of coupling.

In claim 12. (Currently Amended) A display device for use in an image display system comprising at least one display device connected to a host device, wherein an image is displayed on the display device in accordance with an image signal which is output from the host device,

wherein the display device determines a state of coupling with the host device based on a data transfer clock signal which is output from the host device, wherein the at least one display device manages power based on the state of coupling.
